TRACK

VOLUME 41

MATTHEWS •

Round-d-Round Doorway Dolly™ w/Operators Seat

The new Round-d-Round Doorway Dolly from Matthews is the next generation in Doorway Dolly development. Based on the industry proven designed and engineered Matthews Doorway Dolly, the new Round-d-Round model offers all-wheel steering which allows for greater turning flexibility and will turn in a tight 6 foot (2 meter) circle.

The camera operator seat will mount in six different fixed locations. Steering from both ends of the dolly will allow unlimited camera positioning as the dolly rolls on track with either Hot Buttons or the Matthews Centipede or on the ground with the standard pneumatic rubber tires. Load capacity is over 1100 pounds (500Kg) and the platform is carpeted for a non-slip, low-maintenance surface.

Matthews Doorway Dollies include a welded steel plate on the forward, central area of the underside of the chassis to allow for solid mounting of bazookas and other accessories making them integral with the chassis.

Required.....\$250.00

With a length of 51" (130cm) and a width of 28-1/4" (72cm), Round-d-Round Doorway Dolly will operate through standard-size doorways, and with all-wheel steering it will navigate tight 90 degree corners.

The two self-storing sideboards increase platform width to ensure a firm and stable base for camera support.

With a 6-foot turning diameter, steering from either end of the dolly with either the Push Bar/Pull Bar or just the Pull bar alone creates an economical yet versatile mobile camera platform ideal for stage and location.

STORAGE CONFIGURATION

Matthews builds the strongest platform dollies in the business! For years the Doorway Dolly has proven its versatility on stage and location. Quick change pneumatic wheels are standard equipment. The Dolly can easily be fitted with Matthews Hot Buttons for use on straight or 20' diameter curved track. The platform is fitted with a recessed camera tie-down and is carpeted for a nonslip, low maintenance surface.

The Doorway Dolly will move through a full range of travel with either the Push Bar or Pull Bar. Load it with gear to get to the location with ease! The platform can be flipped over for even lower camera positioning. Ground clearance is 9" or 3" when inverted. The removable side boards add an extra 10" per side for increased platform width.

The wheelbase is 28-1/4" wide and the platform length is 51". Hot Buttons can be easily installed to accommodate standard 24.5" width track. Weight Capacity 800 Lbs. (363 kg)

The Doorway Dolly with Turret provides a 360° swing of both the camera mount and operator with all the functions of the standard dolly system. Mitchell mount and single operator seat are standard.

Matthews Doorway Dollies include a welded steel plate on the forward, central area of the underside of the chassis to allow for solid mounting of bazookas and other accessories making them integral with the chassis.

Doorway Dolly Accessories

The Centipede

A fast efficient way to achieve a smooth dolly track shot. Designed for use with most camera dollies not exceeding 34" in width. Each truck consists of 8 wheels, 32 per set, staggered in position. Wheels are engineered to perform on older, less than perfect track as well as the newer, precision track systems using 1-1/2" diameter rails. The Centipede's wheels will remain round under normal conditions. For maximum performance minimum weight load is 200 Lbs. Maximum load is 1500 Lbs. Dollies not exceeding 46" wheel base will work well with the 10' diameter curve track.

Hot Buttons

Hot Buttons work beautifully with Matthews #395100, 395300 or #395043 Doorway Dollies. For straight or 20' diameter curve track, steel, aluminum, or PVC pipe, simply remove the locking nut and self-contained wheel and tire from each axle and replace with Hot Button set and nut. Hot Buttons also make a perfect scooter dolly with just two axles and any size ordinary plywood.

Matthews Hot Buttons will NOT work with 90 degree, tight radius track. If you are using 90 degree track you MUST use the Matthews Centipede PN395201.

HOT BUTTONS

Lenny Levelers

The Lenny Leveler has been designed to stabilize and level the Doorway Dolly. The stabilizer arms relocate the load base from the pneumatic tires to provide an increased footprint and more stable platform. The extended footprint is especially desirable when a jib arm is mounted on the Doorway Dolly, as it effectively increases the center of gravity.

Camera Support — Dollies

Western Dolly

The Western Dolly is a larger, heavier duty platform than the Doorway, with a maximum capacity of 1200 Lbs. (544kg). The wider, longer platform provides an even smoother ride with its larger, wider tires and extended wheelbase. This dolly can be equipped with a turret as can the Doorway. The turret assembly allows for the mounting of two seats and a complete camera configuration supported by a Mitchell Base. The Western Dolly's Pop-Off wheels allow quick removal and easy storage. The axle is integrated into the wheel assembly to prevent the axle from becoming separated from the wheel upon removal. The wheel base of both is 52" with an overall length of 76". The platform size is 48" wide by 66" long. Total weight capacity is 1200 lbs. (544kg). Tire pressure — 16-22 lbs. Whether used as an equipment transportation vehicle or as a camera platform, the Western Dolly provides reliable, heavy-duty, steady support at a reasonable price. While the configuration of the Western Dolly axle has often been copied by competitors, field observation has proven that none have been successful in matching the strength of the Matthews axle. Because it is impossible to anticipate the manner in which the dolly will be loaded or the slope of the terrain on which it will be used, Matthews has learned that the capacity of each axle must match the total capacity of the dolly. The strongest Dolly of its type in the business.

Dolly Track

Matthews manufactures and supplies the industry with both Heavy Wall and stainless steel Dolly Track. Heavy wall is manufactured from 1-1/2" diameter steel tube and is chrome plated to protect it from negative environmental effects. It is slightly less expensive than stainless steel track. Stainless steel track does not require plating. Due to the inherent characteristics of the material, it is impervious to the elements. Additionally, all Matthews track now has black cross members.

CAUTION: Matthews does not recommend that the two types of track be used together. The chrome plating used on the Heavy Wall can create size buildup and the finished diameter may be slightly larger. This can create a noticeable "bump" at the joint. Matthews curved tracks are available to complete 10' and 20' diameter circles. Be advised that most dollies will not navigate the 10' circle without the addition of a multi-wheeled device such as the Matthews Centipede #395200.

Four pieces of 90° curve track are needed to complete a circle. Eight pieces are required for 20' diameter circle. All Matthews Dolly Track is rated to a maximum payload of 1200 lbs (545kg) at the industry standard of 24.5" center to center track width.
